

Allegro Salsa (200kg)

Standing and Transfer Equipment

The Allegro Salsa 200, designed as an active standing aid, allows a single carer to raise a patient into a comfortable, secure standing position. Patient-friendly lift arms enable multiple grip positions during lift, while the height and angle adjustable contoured knee pad offers maximum lower limb support. With a small footprint, the Allegro Salsa is highly manoeuvrable, and with its high capacity safe working load of 200kg the Allegro Salsa is easy to use in an institutional or home environment. Featuring electric leg spread and a removable footplate, the Allegro Salsa is ideal for transferring patients between bed to chair or chair to commode. The Comfort stand-up sling which is padded and supportive, complements the Allegro Salsa lift action.

Technical Specifications

SWL: 200kg

Length of Base: 1050mm

External Base Width: 655mm

Internal Base Width Closed: 585mm

Base Width Adjustment: Electrical Adjustment

Under Bed clearance: 125mm

Min. Height Yoke: 825mm

Max. Height Yoke: 1670mm

Lifter Weight: 48.2kg

Min. Storage Height: 1200mm

Features

- Electric Leg Spread
- Height & Angle adjustable contoured knee pad
- Removable footplate
