

Nora Eco

Standing and Transfer Equipment

The Nora Eco is designed to improve mobility and provide a higher quality of life. The main characterisation of the Nora Eco is its light and innovative design, specifically for residents who still have the ability to stand for a short time with the help of supporting aids. This is the ideal device and the perfect tool for mobility and the transfer of patients as it is very easy to manoeuvre and creates no strain or damage to the spine of the nurse while transferring. It allows for remobilising in a targeted manner while also stabilising and improving the musculoskeletal system which will also improve circulation.

Technical Specifications

- Overall Height: 1168mm
- Height of carrier frame: 126 mm
