

POWERSTAND ELS

ELEVAND STEADYSTAND ELS

The Elevand PowerStand ELS is designed for users with low core stability who have difficulty standing up from a seated position. It assists in transferring patients between seated surfaces. This lift supports the upper body, requiring the user to bear most of their weight while standing and to control their upper body and head. Users are gently lifted to an upright position, with their feet secured on a platform and their shins supported by special pads. It can raise users to a partial or full standing position, encouraging a natural standing and sitting motion. Ideal for everyday activities like getting out of bed, rising from a chair, or using the toilet, the Elevand PowerStand ELS is suitable for use in hospitals, nursing homes, and other care facilities.

FEATURES

TECHNICAL SPECIFICATIONS

Base leg spreading	Electrical	Min.turning diameter (cm)	124
Max. safe working load (SWL) (Kg)	230	Power req./Charger	100-200V/50-60Hz
