

## L9000 SEMI PORTABLE GANTRY SYSTEM

The L9000 Elevand Semi Portable Gantry System is designed for temporary or short-term use. It can be used with both our portable and fixed ceiling hoists. This versatile system offers rail span options of 2, 3, 4, or 6 meters, making it ideal for situations where permanent rail installation is not feasible. The free-standing frame is height-adjustable and supports a safe working load of 200 kg. For long-term use, we recommend CHS Healthcare's heavy-duty custom gantry system or installing a rail directly to the building structure. The system is available for hire or purchase.

### FEATURES
