

# TurnAid T4

Electric turning system  
with speed  
control

# Creating the optimal work environment with TurnAid T4

## **Main uses of TurnAid system**

TurnAid enhances and streamlines the care, relocation and accommodation processes for individuals with severe disabilities in care facilities, institutions, and private residences.

## **How does the TurnAid system work**

TurnAid is an assistive device installed on care beds. The system integrates two established core functions: a siderail and an electric turning mechanism. TurnAid is easily installed on most care bed models, thanks to its universal brackets and adjustable length and width. The system complies with the rigorous standards of the associated medical directive.

TurnAid accommodates individuals weighing up to 350kg, with a focus on ensuring the safety and comfort of both the user and caregiver throughout the task.

# TurnAid's key features og mulighed for ekstra tilbehør
